What is the Towers Game?

At its core, the Towers game is a vertical development game influenced by the classic concept of climbing up a structure while avoiding hidden threats. Players exist with a grid-- normally represented as a series of rows and columns-- forming a tower.

The primary objective is simple: **pick a tile in each row to climb higher.**

- Each successful step up increases the multiplier, thus increasing potential earnings.
- Picking the wrong tile triggers a "loss" (typically represented by a trap, a gargoyle, or a collapsing block), leading to the forfeit of the present round's stake.

The appeal of the game depends on its versatility. Gamers can choose to squander at any time, securing their existing multiplier, or push their luck for a higher payment.

Gameplay Mechanics and Difficulty Levels

Among the specifying functions of the Towers game is its adjustable threat profile. Before starting a round, players usually choose a problem mode. This dictates the grid size (variety of columns per row) and the ratio of safe tiles to hidden hazards.

Problem Mode	Grid Layout (Cols x Rows)	Safe Tiles per Row	Danger Level	Max Potential Multiplier
Easy	4 x 9	3	Safe/ 1 Trap Low	Moderate
Medium	3 x 9	2	Safe/ 1 Trap Medium	High
Tough	2 x 9	1	Safe/ 1 Trap High	Really High
Specialist	3 x 9 (Multiple Traps)	1	Safe/ 2 Traps	Severe
				Huge

The versatility of these modes enables both conservative gamers-- those who choose steady, incremental gains-- and high-risk thrill-seekers to discover a playstyle that fits them.
