How CS: GO Case Battles Work

1. **Setup**-- A gamer produces a battle lobby or signs up with an existing one. The lobby defines the number of cases, the specific case types, and the number of individuals (most typically 1v1, 2v2, or 3v3).
2. **Synchronized Opening**-- Once the battle begins, every individual opens the similar series of cases at the very same time. The system tapes the market value of each skin acquired.
3. **Value Calculation**-- The overall worth of skins each player receives is summarized, utilizing the current Steam Community Market rates.
4. **Winner Determination**-- The gamer with the highest aggregate value wins the pot, which is usually the sum of all skins collected by both sides (minus a home edge).
5. **Payout**-- Winning skins are moved straight to the winner's Steam stock, while losing individuals get nothing (aside from any consolation products, if the platform offers them).
