- **The Peg Field:** A staggered grid of metal or plastic pins. Every time a disc strikes a pin, it has a roughly 50% possibility of bouncing either left or right.
- **The Multiplier Slots:** The collection bins at the extremely bottom, each designated a specific multiplier worth.

The Mathematics Behind the Bounce

Because of the method the pegs are arranged in rotating rows, the path of the chip simulates a binomial distribution (typically pictured as a Galton board). This means chips are statistically even more likely to land in the center slots than in the extreme outer slots. To stabilize this out, online versions assign lower multipliers to the center and greatly higher multipliers to the edges.
