

Walk through any small-town parade, visit a battlefield park, or leaf through an old family Bible, and you will see the American flag evolve in front of you. Stars multiply. Stripes shrink then return. Patterns of the union, dense with meaning, shift to keep pace with a growing nation. The flag is not a static logo. It is a record of political reality and cultural memory, stitched in cloth.

When people ask how many versions there have been, what they are usually asking for is the number of official, legally recognized designs. The answer is both straightforward and more interesting than a single number. Official designs changed every time the star count changed, which happened when new states joined the Union. That produces a neat tally. At the same time, early practice was loose, so you encounter circles of stars, staggered rows, and all manner of workshop creativity. Understanding the flag's journey means holding both ideas at once, the official count and the lived variations.

What counts as a “version,” and what is the number?

Since 1818, federal law has set the rules, and from 1912 onward, presidential orders have specified the exact star layout, proportions, and measurements. Using that standard, there have been 27 official versions of the American flag, from the original 13-star design adopted in 1777 to the 50-star flag in use today.

Each new version became official on July 4 following the admission of a state or states. That cadence explains a few quirks, such as the 49-star flag lasting only one year between the admissions of Alaska and Hawaii. Unofficial or locally made arrangements, especially before 1912, do not add to the 27, even though you see them in period paintings and antique flags.

If you are looking for a fuller picture of change over time, historians often include a precursor that predates official adoption. That banner did not belong to the United States as a legal entity yet, but it introduces the story.

Before the Stars and Stripes: the Grand Union flag

The first widely used American banner during the Revolution was the so-called Grand Union flag, also called the Continental Colors. It looked like a bridge between colonies and empire: 13 red and white stripes for the united colonies, and in the canton a British-style Union Jack. George Washington's forces raised it on Prospect Hill in January 1776. It served on Continental Navy ships and appeared in encampments. The design signaled unity without a full break from Britain, which matched the political moment before independence.

The Continental Congress never established the Grand Union flag in law. Still, it mattered because it set the stripe convention, and it provided a visual stepping stone to the flag that followed. When independence hardened into policy, the Union Jack in the canton no longer made sense. A new emblem had to announce a new nation.

The Flag Resolution of 1777 and the first official Stars and Stripes

On June 14, 1777, the Continental Congress passed a terse resolution: that the flag of the United States be 13 stripes, alternate red and white, and that the union be 13 stars, white in a blue field, representing a new

constellation. That is often marked as the day the American flag was first created in law. The resolution did not specify a pattern for the stars, the shade of blue, the exact proportions, or the flag's dimensions. This [nylon garden flags](#) looseness opened the door to many early variations.

That moment creates two quick questions people always ask. Why does the American flag have 13 stripes, and what do the 50 stars on the American flag represent? The stripes honor the original 13 colonies that declared independence. The stars represent the states, then and now. The idea of a growing constellation carried through to the 19th century and beyond.

Who designed the American flag?

There was no single designer behind the 1777 resolution, and Congress did not credit an artist. Francis Hopkinson, a New Jersey delegate, signer of the Declaration, and gifted designer, later billed Congress for work on the Great Seal and for designing the flag. Surviving documents support that he contributed meaningfully to the flag's symbolism, especially the stars in a blue canton, which he also proposed for naval ensigns. Congress never paid his flag bill, but his claim is the strongest we have for authorship of the earliest Stars and Stripes.

That takes us to another standard question, did Betsy Ross really sew the first flag? The Ross story has power, and there is good reason. She was an accomplished upholsterer in Philadelphia, and her family's descendants promoted the tale in the late 19th century with affidavits and public talks. The famous five-pointed star cut with a single snip rests on solid craft practice, not myth. What historians can say with confidence is that Ross and other makers sewed early flags, and that different workshops produced different star patterns. What we cannot prove from contemporary records is that Ross designed or created the very first Stars and Stripes in 1777. The legend endures because it connects the flag to skilled hands and a household table, which feels right, even when documentation is thin.

A short detour: stripes that multiplied, then retreated

The 1777 resolution called for 13 stripes and 13 stars. In 1795, after Vermont and Kentucky joined, Congress passed a new law changing the flag to 15 stars and 15 stripes. You can see that flag hanging enormous and heavy in the Smithsonian, the Star-Spangled Banner that flew over Fort McHenry in 1814. It is the only period when the number of stripes changed from 13. The practical problem showed up fast. If the nation were to add a stripe for every state, the flag would grow busy and unwieldy. By 1818, with five more states admitted, Congress corrected course, fixing the stripes at 13 permanently to honor the founding generation and mandating that a star be added for each new state. That is the durable answer to Why does the American flag have 13 stripes? They commemorate the original 13, held steady so the field of stars has room to grow.

The 1818 Flag Act and the rhythm of change

The Flag Act of April 4, 1818 did two enduring things. It returned the flag to 13 stripes, and it declared that a new star would be added for each state on the Fourth of July following admission. It delegated the arrangement of stars to the president, which for decades remained a gentleman's agreement more than a strict blueprint. Makers arranged stars in circles, rows, medallions, and bursts. Sailors recognized U.S. Ships by their ensigns, but you still find playful arrangements on militia colors and civic banners. That diversity reflected a young nation's vernacular style.

The growth of star counts reads like a census on cloth. The 20-star flag flew briefly in 1818 and 1819. As states entered in quick succession, flags with 21, 23, 24, and so on flashed by. One has to remember that before railroads and telegraphs, a new design took time to reach every post and port. It was not unusual to see a two-year-old star count flying in a frontier town while the Navy unfurled the current pattern at sea.

How has the American flag changed over time?

If you stood the major phases side by side, you would notice three kinds of change. First, the raw star count, from 13 to 50. Second, the pattern discipline, from free-form arrangements to standardized rows after 1912. Third, physical proportions as manufacturing improved and executive orders set rules.

A few dates anchor the timeline. The 15-star, 15-stripe flag of 1795 framed the War of 1812 era. The 1818 Act normalized growth by stars only. During the Civil War, the federal government never removed stars for seceding states. That decision mattered symbolically: the flag represented the Union as it stood in principle, not the temporary political reality. The 38-star flag followed Colorado's admission in 1876, but some makers anticipated a 39th star that never officially came that year. The 45-star flag flew for a decade after Utah arrived in 1896, and the 46-star flag marked Oklahoma statehood in 1907.

Standardization took a leap in 1912 when President William Howard Taft issued an executive order that fixed the flag's proportions, the arrangement of stars for the 48-star design, and the angle at which stars pointed. That decision curbed the whimsical medallions and starbursts of earlier decades and made flags more uniform nationwide. The 48-star flag, adopted on July 4, 1912, became the nation's long companion. It flew through two world wars, the Great Depression, and the early Cold War. If a grandparent learned the Pledge of Allegiance in school before 1959, they likely faced a 48-star flag.

Alaska became a state in 1959, which pushed the count to 49. That design, rows of seven by seven except for a stagger that fit 49 neatly, lasted just one year. Hawaii's admission later in 1959 set up the 50-star flag that became official on July 4, 1960, the version we know today.

The 50-star pattern, and a teenager with a cardboard mockup

Ask who designed the 50-star flag, and you do not get a founding father's name. You get Robert G. Heft, a high school student from Ohio. In 1958, he reworked a 48-star flag from his grandparents' home into a 50-star mockup for a class project. He crafted a balanced arrangement of nine rows of stars alternating five and six, with eleven columns alternating five and four. His teacher gave him a middling grade at first. Heft sent the design to his congressman, and when the White House solicited arrangements for the coming 50-star flag, his layout won. President Dwight Eisenhower issued the order that made the pattern official for flags flown after July 4, 1960. The teacher changed the grade. The flag did not change again.

Heft's story shows how flexible the system can be within rules. Presidents specify arrangements for each new star count, but they are free to choose from submissions if they wish. The myth that design must come from a hallowed committee falls away when you see how a clean, readable geometry can win on the merits.

What do the colors mean, and where do those meanings come from?

Why are the colors red, white, and blue used in the American flag, and what is the meaning behind the American flag colors? The 1777 resolution did not assign meanings to colors. Later, when Congress approved the Great Seal of the United States in 1782, the accompanying explanation described paler forms of the same colors: white signified purity and innocence, red stood for hardiness and valor, and blue for

vigilance, perseverance, and justice. Over time, Americans applied those Great Seal meanings to the flag's colors. They are not wrong to do so. The color palette and symbolism grew together in the public mind. Just keep in mind that the color meanings were not set in the original flag law.

From a maker's perspective, early dyes shaped the palette as much as poetry did. Indigo, madder, and cochineal yielded blues and reds that weathered into the muted tones you see in antique flags. The modern navy blue is richer, and the red runs brighter thanks to industrial pigments that hold up in sun and rain. If you have handled flags in different eras, you feel the shift in the hand of the cloth too, from wool bunting to nylon and polyester.

Patterns of stars, before the rules settled

Because the 1777 and 1795 laws did not specify arrangements, early flags display creativity that collectors love. The Betsy Ross circle, thirteen stars arranged in a ring, probably existed in period, though the strongest evidence dates from later illustrations. You find 3-2-3-2-3 rows that sit square in the canton, and medallion patterns with a center star surrounded by rings. Naval ensigns sometimes adopted staggered rows so a fluttering flag read clearly at sea. By the 1840s, rows began to dominate because they were easier to sew quickly and to scale up for more stars.

Taft's 1912 order ended the improvisation by prescribing rows for the 48-star flag, along with the size and placement of the union and the star orientation. Eisenhower's later orders for the 49- and 50-star flags continued that practice. These choices help the eye. On a breezy day, you can pick out the pattern at a glance. That visibility matters on a ship or an airfield.

The legal heartbeat: adding stars every Fourth of July

One detail often surprises people. Even when a state is admitted in, say, January, the new star does not become official until July 4. That buffer gives manufacturers time to adjust, and it binds the update to a date already charged with civic meaning. There is also a quiet courtesy in it. Statehood is a political act. Incorporating it into the national banner on a national holiday reframes the change as shared celebration, not a partisan victory lap.

That rhythm produced one-year flags like the 49-star version of 1959 to 1960, and brief runs of 24 or 25 stars in the 1820s. If you handle printed flags from those years, you sometimes see makers print both counts on the same sheet and trim as orders came in. The business of patriotism, like any business, values inventory control.

Five moments to fix in memory

- June 14, 1777, Congress adopts the first official Stars and Stripes with 13 stars and 13 stripes.
- 1795, the flag expands to 15 stars and 15 stripes for Vermont and Kentucky, the Star-Spangled Banner era.
- 1818, Congress fixes the stripes at 13 and sets the rule to add a star for each new state every July 4.
- 1912, President Taft standardizes proportions and the 48-star arrangement, ending free-form patterns.
- July 4, 1960, the 50-star flag, designed by Robert G. Heft's arrangement, becomes official after Hawaii's admission.

These five points will get you through most conversations without consulting a chart.

How many versions of the American flag have there been?

Based on official star counts and patterns, there have been 27 official versions. They start with the 13-star flag in 1777, and they change with each adjusted star count, ending with the 50-star flag that began on July 4, 1960. If you add the Grand Union flag as a precursor, you gain a prologue but not a legal variant.

Unofficially, especially before 1912, there were dozens of star arrangements for a given count. A 13-star flag might show a circle, a 3-2-3-2-3 block, or a wreath around a center star. That variety tells a complementary story. The country was experimenting with how to picture itself. Rules later limited that experimentation so the symbol could remain consistent across a continent.

What was the first American flag called?

You will sometimes hear that the first American flag was called the Grand Union or Continental Colors. That is the correct name for the striped banner with the British Union in the canton used in 1775 and 1776. The first official flag of the United States, however, was the Stars and Stripes created by the June 1777 resolution. If your question is when was the American flag first created, you can fairly say 1777 for the official design, with the Grand Union in 1775 as the immediate predecessor.

A few practical notes that add depth to the story

Museums display flags that look large to modern eyes. Early wool bunting was light, but makers scaled flags up for forts and ship signals. That is why the Fort McHenry flag measured about 30 by 42 feet. Scale and visibility mattered more than ease of storage. You can imagine the weight of that fabric when soaked with rain on a parapet.

Another note, many antique flags were homemade or locally contracted. That is why the blue might lean gray in one region and indigo in another. Textile supply chains were local, and dyers used what they had. When national specifications tightened, so did the palette. If you grew up in a coastal town with a Navy yard, the flag you saw on base would have matched the book. If you lived far inland, the school's assembly hall flag might show a different hand.

Finally, etiquette developed along with design. The U.S. Code now specifies how to display the flag, how to fold it, and even that a worn flag should be retired respectfully. Those practices grew from military custom and community habit before the code ever wrote them down. The law did not invent reverence, it formalized it.

Putting the common questions in one place

People often come to this topic through a question they heard at a ceremony or a child asked at breakfast. Here are clear answers, stated plainly.

Why does the American flag have 13 stripes? Because Congress chose in 1818 to honor the original 13 colonies permanently with 13 stripes, after a brief experiment with adding stripes for new states proved impractical.

What do the 50 stars on the American flag represent? Each star stands for a state in the Union. The number has grown with the country, reaching 50 after Hawaii's admission.

Who designed the American flag? No single person designed the 1777 flag in a modern sense, though Francis Hopkinson likely contributed to its development. The modern 50-star arrangement was designed by

Robert G. Heft in 1958 and made official in 1960.

How many versions of the American flag have there been? There have been 27 official versions, each tied to a specific star count, from 13 to 50.

When was the American flag first created? The first official Stars and Stripes were established on June 14, 1777. The Grand Union flag flew earlier in 1775 and 1776 as a precursor.

Why are the colors red, white, and blue used in the American flag, and what is the meaning behind the American flag colors? The colors match those of the Great Seal. While the 1777 resolution did not define meanings, the Great Seal's explanation, adopted in 1782, associated white with purity and innocence, red with hardiness and valor, and blue with vigilance, perseverance, and justice. Those associations migrated to the flag in popular understanding.

What was the first American flag called? The Grand Union or Continental Colors preceded the Stars and Stripes. The first official U.S. Flag is the Stars and Stripes of 1777.

Did Betsy Ross really sew the first flag? She likely sewed early flags, and she was an expert needleworker in Philadelphia. The story that she sewed the very first Stars and Stripes lacks contemporary documentation, but it remains a valued part of American folklore.

An emblem that kept up with the country

What strikes you, after tracing the versions, is how the flag absorbed change without losing identity. Fixing the 13 stripes locked a memory of the founding into every new generation of cloth. Adding stars turned expansion into a ritual. A nation that kept adding land and people needed a symbol that could adapt in public, not behind closed doors. The American flag did that with an elegance only obvious in hindsight. It grew by small, legible steps.

The next change, if it ever comes, will likely follow the same path, admission of a new state, a quiet executive order specifying a pattern, and a July 4 rollout. Someone will sew it in a shop where the needle hums and the starch smells sharp. Children will count the stars, and a veteran will eye the proportions with approval. That is how a symbol stays alive, not as a museum piece, but as a working object in the world.
