- **Rock** crushes Scissors.
- **Scissors** cuts Paper.
- **Paper** covers Rock.

In a gambling context, however, 2 players (or a player and the "house") position a wager before throwing their indications simultaneously. If there is a tie, players normally re-throw until a definitive winner emerges, or bets are pushed and returned.

The Mathematics and House Edge

Mathematically, a totally random game of Rock Paper Scissors is a fair game. Each player has a **1 in 3 chance (33.33%)** of winning, losing, or connecting on any given throw.

When bet a casino or online platform, operators present a house edge through platform fees (understood as "rake") or slightly unfavorable payment odds.

Platform Type	System	Approximate House Edge/ Fee
P2P Crypto Sites	Gamers bet against each other; platform takes a cut of the pot.	1%-- 3% (Rake)
Casino RNG Games	Player plays versus a configured computer system algorithm.	2%-- 5%
Live Dealer/ Game Shows	Streamed cope with human hosts or automated mechanical arms.	3%-- 6%
