What Determines a Skin's Rarity?

CS: GO designates every skin to a **rarity class** that reflects its in-game drop possibility:

Rarity Class Approximate Drop Chance *Typical Quality Consumer Grade ~ 80% White Industrial Grade ~ 15% Light Blue Mil-Spec ~ 4% Blue Restricted ~ 2% Purple Categorized ~ 0.5% Pink Covert ~ 0.25% Red Rare Special Item < 0.01% (case-specific) Gold (Gold)

* Drop possibilities are approximate and vary between weapon cases and operation collections.

Beyond the base rarity, a number of extra attributes press a skin into the "rare" category:

1. **Float Value**-- The lower the float (0.0-- 1.0), the cleaner the finish. Minimal wear (Factory New or Minimal Wear) typically commands a premium.
2. **Pattern/StatTrak™**-- StatTrak™ skins (those that track kills) are usually scarcer than their vanilla equivalents.
3. **Case or Collection Age**-- Skins from discontinued cases (e.g., *The Arms Deal* Case) end up being increasingly scarce as the case stops dropping.
4. **Occasion or Esports Origin**-- Limited-time competition Souvenirs or products connected to particular majors (e.g., *Cobblestone Memento*) hardly ever reappear.
5. **Distinct Finishes**-- Special finishes such as *Fade*, *Case Hardened* (with a high blue gem pattern), or *Night Stripe* have an unique visual appeal that fuels need.
