If you run a home service company, your website needs attention even after it goes live. Pages need updates. Security needs to stay current. Backups need to happen. If something goes down, somebody needs to catch it. Most business owners do not have time to stay on top of all that while also running jobs, answering calls, and managing crews.

That is where website maintenance matters. Scalable Websites builds and manages mobile-first websites for contractors, home service businesses, and local small businesses. For many owners, the goal is simple. Have a site that works, keeps up with the business, and does not become one more thing on the to-do list.

Based in Montgomery, TX, Scalable Websites serves business owners across Montgomery County and greater Houston, including Montgomery, Magnolia, The Woodlands, Conroe, Willis, Spring, Tomball, Cypress, Kingwood, Humble, Houston, Katy, and Sugar Land. If you are looking for a website designer Montgomery TX businesses can work with in person, that local service matters.

Website maintenance is about keeping the site useful

A website is not something you set up once **small business website design montgomery tx** and forget. Phone numbers change. Service areas expand. Photos need to be swapped out. Lead forms need to keep working. Reviews should stay visible. On top of that, there is the technical side that most owners should not have to deal with.

Scalable Websites includes website maintenance with features that help keep sites current and protected. That includes unlimited update requests, security updates, uptime monitoring, daily offsite backups, and a dedicated project manager.

That setup is practical for contractors and other service businesses. Instead of trying to figure out how to log in, change content, or troubleshoot a problem, the business owner can send the request and move on to the next job. For a company focused on small business website design, that kind of support is not extra fluff. It is part of making the website manageable in real life.

The site is built to support day-to-day business

Maintenance works better when the website is built with the business in mind from the start. Every site includes click-to-call, Google reviews shown on the site, custom lead forms with instant text and email alerts, on-page SEO from day one, and hosting and security.

Those pieces matter because they help the site do its job while the owner stays focused on running the company. A contractor website design should make it easy for someone to call, fill out a form, and get a quick response. It should also be mobile-first, since many visitors are checking a site from a phone.

For owners thinking about a website redesign, maintenance is also part of the bigger *web design montgomery tx* picture. A redesign can give the business a better structure and a cleaner customer experience, but it still needs ongoing care after launch. Keeping forms working, updating services, and monitoring uptime are part of keeping that redesign valuable over time.

What business owners are actually getting

Scalable Websites offers plans that fit different stages of business, but the maintenance approach stays consistent. Every plan comes with a 6-month minimum, then month-to-month. The client owns the site after 36 months, and there is a free design refresh every 36 months. There is also a 30-day money-back guarantee on signup.

Here is the basic plan structure:

- Starter, $95 a month for a single-page site
- Growth, $195 a month for 3 to 5 pages, plus missed-call text-back, unlimited lead follow-up, Search Console, and Google Analytics
- AI Enhanced, $295 a month for 10+ pages, plus blogging, priority support, AI SMS and chat, and SEO citations

That means a business can choose the level that fits now, while still getting the core support needed to keep the site maintained. Whether the company needs a single-page presence or a larger custom WordPress website, the ongoing management is designed to reduce the owner's workload.

Built for contractors and local service businesses

Scalable Websites focuses on businesses that need straightforward, reliable web design. That includes roofing, HVAC, plumbing, fire protection, fencing, concrete coatings, pools, septic, landscaping, remodeling, general contractors, and 30+ more trades.

That focus matters because the needs are different from other industries. A contractor does not need a website that looks impressive but creates extra work. They need one that helps people call, request service, and trust the business enough to reach out. They also need support when details change, because service businesses change fast.

For companies searching for web design Montgomery TX or web design The Woodlands, the value is not just in getting a new site built. It is in having somebody continue to manage the important details after the build is done. That is especially helpful for owners who want a custom site without becoming the person responsible for every update and every technical issue.

Founded in January 2025, Scalable Websites is veteran-owned, led by owner Preston Toor, and backed by a team with 10+ years of experience and 200+ websites built for home service businesses. The company meets clients in person and holds a 5.0-star Google rating.

At the end of the day, website maintenance should make business simpler. The owner should be able to focus on estimates, scheduling, crews, and customers, not backups, security updates, or whether the site is still online. That is the kind of practical support many local businesses are looking for when they invest in a website.
