- A **Target Multiplier** input field.
- The **Win Chance** portion (which instantly adjusts based on the selected multiplier).
- A prominent **Bet** or **Play** button.

When a player places a bet in Limbo, the game produces a random multiplier result. If the <https://bitz.io/games/limbo-02> produced multiplier is **higher than or equivalent to** the player's target multiplier, the bet wins. If it falls listed below the target, the bet is lost.

The Math Behind the Game

In Limbo, the target multiplier is directly connected to the likelihood of winning and the House Edge (normally around 1% to 2%).

Target Multiplier Approximate Win Chance (Assuming 1% House Edge) Payout Potential **1.01 x** 98.01% Extremely High Probability, Very Low Payout **2.00 x** 49.50% Near 50/50 Coin Flip **5.00 x** 19.80% Moderate Risk, Moderate

Reward **10.00 x** 9.90% High Risk, Solid Payout **100.00 x** 0.99% Very High Risk, 100x Return **1000.00 x+** 0.09%
Extreme Risk, Massive Jackpot Potential

As seen in the table, as the target multiplier increases, the win possibility drops proportionally. Gamers have total control over this risk-reward slider, making Limbo among the most flexible video games in an online gambling establishment lobby.
