The mechanics are uncomplicated:

1. **The Buy-In:** Participants pick a set of cases and agree on the number of rounds. The total expense of the cases acts as the entry fee for each player.
2. **The Opening:** Rounds play out sequentially. In each round, every player opens the designated case.
3. **The Scoreboard:** The worth of every skin dropped is tallied in real-time based on existing marketplace rates.
4. **The Winner:** At the end of all rounds, the player (or group) who has actually collected the highest overall financial value of skins wins **all** the products dropped in the battle-- including those opened by opponents.

If luck is on a player's side, they can win an inventory worth significantly more than their initial buy-in. If luck fails, they lose whatever. It is this high-risk, high-reward dynamic that drives the enormous appeal of the format.
