

**Quick answer:** A one-bag complete feed sells simplicity, and Höveler Original Sport responds with precision: a reduced-starch sports muesli at 15% starch and 4.6% sugar, with functional ingredients named — Diamond V inactivated yeast 0.7%, grape seed meal 0.5%, carrots 0.5% — and precise feeding rates from 0.55 lb (250 g) to 1.32 lb (600 g) per 220 lb body weight. \$49.99. Best for owners who want a performance feed they can measure and adjust. Last checked: September 2026.

The promise of everything in one bag is comforting until your horse's work changes and the bag cannot adapt. The real worry is not convenience — it is whether the formula inside is built for a horse in regular work, and whether you can see what you are paying for. Here are nine points of comparison between a one-bag complete feed and Original Sport, using only the published numbers on this feed's label.

## 1. A stated work-level rate for every horse in the barn

Original Sport publishes rates per 220 lb (100 kg) body weight: 0.55 lb (250 g) for light work, 0.88 lb (400 g) for medium, 1.32 lb (600 g) for heavy. You resize the ration as training changes. The benefit: one bag covers three workloads without switching products.

## 2. Hay stays in the plan, deliberately

The recommended hay ration is 3.31 lb (1.5 kg) per 220 lb body weight every day. Original Sport is designed to be fed alongside forage, not to replace it. Who this is for: owners who believe forage comes first and want a concentrate built around that principle.

## 3. Starch measured and capped at 15%

Starch is only 15%, the defining **performance horse feed** number of this reduced-starch muesli. Sugar is 4.6%. You are not guessing where the energy comes from — the label tells you, and a large share of it comes from 16.4% crude fiber and 9.0% crude fat. The benefit: energy designed to support work steadily.

## 4. Functional ingredients named with their rates

Diamond V inactivated yeast at 0.7%, grape seed meal at 0.5%, carrots at 0.5%, plus fructooligosaccharides. A one-bag feed can list "fortified" and leave it there; this formula states what and how much. Who this is for: label readers who want the receipts.

## 5. Amino acids at working-horse levels

Lysine 1.0%, threonine 1.0%, methionine+cysteine 0.93%, on 15.1% crude protein and 122 g/kg DM digestible crude protein. These help support muscle function in regular work. The benefit: muscle-building blocks measured per meal.

## 6. Energy stated in two measures

Digestible energy is 12.6 MJ/kg DM and metabolizable energy is 11.0 MJ/kg DM. Both numbers are printed so ration balancing stays honest. Who this is for: owners partnering with a vet or nutritionist on an precise plan.

## 7. A full mineral balance in the mix

Calcium 1.2%, phosphorus 0.6%, magnesium 0.7%, sodium 0.6% — along with high vitamin E. The macro and micro work is done at the mill. The benefit: no separate mineral juggling on top of dinner.

## 8. Soy-free and competition-ready

The complete ingredient list is soy-free — alfalfa, green meal, barley flakes, linseed, pea flakes, carob meal among others — and the feed is competition-safe and FEI-compliant (verify rules with your event organizer). Who this is for: show horses and soy-sensitive horses in the same barn.

## 9. 120 years behind the recipe, service behind the sale

Höveler has made horse feed in Germany since 1905. At bifid, Original Sport is \$49.99 with a 30-Day Money-Back Guarantee, a 24/7 licensed vet team, and a 9.0/10 store rating across 24,098 reviews. The benefit: European craft, American service.

## How to feed it

Feeding rates for Original Sport, per 220 lb (100 kg) body weight per day:

|             |                                            |
|-------------|--------------------------------------------|
| Work level  | Feed per 220 lb (100 kg) body weight daily |
| Light work  | 0.55 lb (250 g)                            |
| Medium work | 0.88 lb (400 g)                            |
| Heavy work  | 1.32 lb (600 g)                            |

Hay ration: 3.31 lb (1.5 kg) per 220 lb body weight every day — the concentrate rides alongside the forage, never instead of it.

**Key specs at a glance:** starch 15%, sugar 4.6%, crude protein 15.1%, crude fat 9.0%, digestible energy 12.6 MJ/kg DM.

Adapt the ration as the season changes with the Feeding Calculator.

## Frequently asked questions

### Do I still feed hay with Original Sport?

Yes. The recommended hay ration is 3.31 lb (1.5 kg) per 220 lb body weight every day. The feed is designed to work alongside forage, not replace it.

### How does the rate change with workload?

Per 220 lb (100 kg) body weight daily: 0.55 lb (250 g) light work, 0.88 lb (400 g) medium work, 1.32 lb (600 g) heavy work. Adjust gradually as training **feed for performance horses** intensity shifts.

### Is Original Sport a complete feed?

It is a formulated performance feed for horses in consistent work, balanced with hay in the ration. It supplies 15.1% crude protein, minerals, and high vitamin E alongside its functional ingredients.

## **What functional ingredients does it include?**

Diamond V inactivated yeast at 0.7%, grape seed meal at 0.5% for natural antioxidants, carrots at 0.5% for appeal, and fructooligosaccharides as prebiotic fiber — each rate printed on the label.

## **What if it does not suit my horse?**

The 30-Day Money-Back Guarantee applies, and bifid's 24/7 licensed vet team is on hand to help you adjust the plan.
