1. The player positions a wager.
2. The player sets a **Target Multiplier** (e.g., 2x, 10x, 100x, and even 1,000,000 x).
3. The game generates a random number (the result).
4. If the created result is **greater than or equivalent to** the target multiplier, the player wins! If it falls below, the wager is lost.

(Note: With a standard 1% house edge, a 2x multiplier yields approximately a 49.5% chance of winning.)
