

What should you know about accessing dental implant care at Farnham Dentistry near Julington Creek?

Farnham Dentistry offers dental implant consultations and treatment for missing teeth, including implant-supported dentures, at its Jacksonville, FL, office near Julington Creek. The practice uses X-Guide 3D navigation to help plan and guide implant placement. Whether implants are suitable and what treatment may involve depend on an individual evaluation. This guide covers how to arrange a consultation, options to discuss, costs to ask about, and planning your visit.

How can you access dental implant care near Julington Creek?

Farnham Dentistry is in Jacksonville's Mandarin area, near I-295, and serves surrounding communities, including the Julington Creek area. Call the office to ask about an implant consultation, current availability, and practical details before setting out.

Posted hours are Monday through Wednesday, 7:30 a.m. to 5:30 p.m.; Thursday, 7:30 a.m. to 5 p.m.; and Friday, 7 a.m. to 1 p.m. Because other pages on the practice website list conflicting hours, confirm the schedule directly.

Where is Farnham Dentistry located?

The office is at 11528 San Jose Blvd, Jacksonville, FL 32223, near I-295. Its location serves patients in Mandarin and nearby communities, including people seeking care near Julington Creek. Check a current map or contact the office for directions that suit your starting point; travel times depend on traffic and where you are coming from.

How do you arrange an implant consultation?

Call Farnham Dentistry at (904) 262-2551 to ask about arranging a consultation for missing teeth. Ask what records or information to bring, such [implant dentist](#) as details of prior dental treatment or your current concerns, and whether any preliminary information would be helpful.

Confirm the office's current hours before visiting, particularly if you are planning around a workday or traveling from outside Mandarin. You can also ask how the practice handles scheduling and what to expect at the initial appointment.

What happens during a dental implant consultation?

A consultation gives you a chance to describe the tooth or teeth you are missing, explain what you hope to achieve, and discuss your oral health and possible treatment pathways. The conversation should clarify what needs to be assessed before a plan can be recommended; one approach does not fit everyone.

Farnham Dentistry does not provide published implant outcome figures in the available practice information. Ask the clinician how your individual findings inform the recommendation, what alternatives may be appropriate, and what additional evaluation is needed before you decide.

Am I a candidate for dental implants?

Candidacy requires an individual clinical assessment. Your dentist may need to evaluate your oral health and the area where a tooth is missing, and may recommend an examination or imaging before discussing a treatment

plan. Ask which assessments are needed in your case and what each is intended to show.

It is also reasonable to ask whether other dental care should come first or whether a different treatment pathway may be worth considering. A consultation is the place to discuss your circumstances, not a guarantee that implants will be suitable.

What should I ask before choosing an implant treatment plan?

Ask what restoration is being proposed and how treatment would be staged. Find out what appointments may be involved, what timing to expect between stages, and whether temporary teeth are part of the plan. Details vary, so ask the clinician to explain the proposal in plain language.

Discuss alternatives, ongoing maintenance, and risks relevant to your situation before making a decision. You can also ask what could change the plan as treatment proceeds and whom to contact with questions between appointments. A clear conversation helps you understand both the intended result and the practical commitments involved.

How does Farnham Dentistry plan and restore implants?

Farnham Dentistry describes using X-Guide 3D navigation to plan and guide implant placement. The practice also offers CEREC digital scanning and same-day crowns. Discuss these technologies and services during a consultation to understand how they might relate to your proposed care.

The availability of same-day crowns does not mean every implant case receives a final crown on the day of placement. Ask the practice to distinguish any temporary restoration from the final tooth and explain the expected timeline for your treatment.

What is X-Guide 3D navigation?

X-Guide is a 3D navigation system used to help plan and guide implant placement. At a high level, navigation helps the clinician work from a planned implant position during the procedure. Ask how it would be used in your case and what role it plays alongside examination and imaging.

A technology description alone does not establish which treatment is right for you or predict an individual result. Your clinician can explain the proposed approach, what information guides the plan, and whether any other steps are needed before placement.

Can you get a same-day crown with an implant?

Farnham Dentistry offers same-day crowns and CEREC digital scanning, but that capability should not be taken to mean a final crown can be placed the same day as every implant procedure. The overall timeline depends on your treatment plan and the type and timing of the restoration.

Ask when any temporary tooth would be placed and when the final tooth is expected. Clarify which parts of the process may happen at the office and whether the proposed schedule could change based on your evaluation.

Which implant-supported options might be discussed?

Farnham Dentistry offers treatment for missing teeth, including implant-supported dentures. Which restoration may suit you depends on the teeth you are missing, your needs, and the findings from your evaluation. The

practice's available information does not establish a complete menu of implant restorations, so ask which options are relevant to your situation.

Can dental implants support dentures?

Implant-supported dentures are among the services Farnham Dentistry says it offers. If you currently wear a denture-or are considering one-ask how the proposed design would differ from your current or preferred denture and what role the implants would play.

Discuss practical details that matter to you, such as the planned restoration, appointments, at-home care, and ongoing maintenance. The clinician can explain which design is being considered after reviewing your needs and examining you.

What affects the choice between replacing one tooth and several?

Tell the dentist how many teeth are missing and what you would like to address. Ask how the proposed plan would meet those needs and whether alternative pathways should be considered. The conversation should focus on your evaluation and goals, not an assumed solution based only on the number of teeth involved.

Before agreeing to a plan, ask what restorations it includes and how treatment would proceed. If you are weighing more than one approach, request an explanation of the differences in steps, timing, maintenance, and overall cost.

What should you know about dental implant costs and coverage?

Farnham Dentistry-specific prices are not provided in the available information, so request an individualized written estimate after an evaluation. For context only, local estimates for a single implant, abutment, and crown are about \$3,000 to \$6,000 per tooth. These advertised or reported benchmarks are not guaranteed prices; your total may change with the restoration and any additional procedures.

Ask the practice to distinguish included services from items that may be billed separately. Extractions, grafting, anesthesia, temporary teeth, imaging, and the final restoration can affect the total. Confirm the assumptions behind the quote before comparing it with another estimate.

What should an itemized implant estimate include?

Check whether the written estimate identifies the implant post, abutment, temporary and final teeth, imaging, extractions, grafting, anesthesia, and maintenance. If an item does not apply to your proposed plan, ask the practice to clarify rather than assume it is included.

Ask what happens if an implant does not integrate as intended, including whether additional treatment could be recommended and how related costs would be handled. A detailed estimate can help you understand the proposed stages and identify questions before you commit.

Does dental insurance or Medicare cover implants?

Private dental-plan coverage depends on the policy's terms, exclusions, waiting periods, network rules, and annual maximum. Many plans have annual maximums of \$1,000 or \$1,500, though some are higher; your plan may differ. Original Medicare generally does not cover implants, while Medicare Advantage dental benefits vary by plan.

Verify coverage and any preauthorization requirements directly with your insurer rather than relying on a general estimate. You can also ask Farnham Dentistry what billing information it can provide to help you check benefits and understand potential out-of-pocket costs.

What can you learn about the practice before your visit?

Farnham Dentistry is a family practice that began in Mandarin in 1983. Dr. MacKenzie Farnham is featured on the practice's implant page and describes leading dental-care and oral-hygiene education trips to El Salvador. These details offer background, but they are not evidence of implant-specific outcomes; ask the practice directly about the questions that matter to your care.

What recognition has Farnham Dentistry received?

Farnham Dentistry lists Best Dentists List recognition by Jacksonville Magazine in 2024 and 2021, as well as Pinnacle of Professional Dentistry. If these distinctions are relevant to you, ask the office what they recognize and how they relate-or do not relate-to the services you are considering.

Awards do not certify implant-specific results or predict an individual patient's experience. For treatment decisions, focus on the proposed plan, your questions, and the explanation you receive during an evaluation.

How can you check practical access needs?

A third-party listing reports a wheelchair-accessible entrance, parking lot, and restroom. Because access needs can be specific, contact the office before your appointment to confirm whether the available features will work for you and to discuss any assistance you may need.

You can also verify current hours and ask about directions, parking, or other arrangements when you call. Checking these details in advance can make planning your visit easier.

If you are considering dental implants in Jacksonville, Farnham Dentistry can discuss your needs and arrange an evaluation to determine which options may be appropriate. Call (904) 262-2551 to ask about a consultation and request a written treatment estimate.
